

## 7mm, 5mm & 3mm LED Screens in action

## 7mm LED screen specification

Our 7mm LED screen stock has grown over the last few years and we now boast a stock of over 200 units. We have used this very popular product on everything from exhibition stands to conference sets and rock n roll tours. This screen is most popular for stage applications where the viewing distance is over 7m and a large screen is required. It's high brightness levels allow us to use the screen on outdoor stage applications also.

|                         |               |
|-------------------------|---------------|
| ★ Product               | Chauvet PVPS7 |
| ★ Pixel Pitch           | 7.8mm         |
| ★ Panel Size            | 500mm x 500mm |
| ★ Brightness            | 1500 NITS     |
| ★ Viewing Distance      | 7-8m          |
| ★ Resolution (pixels)   | 64 x 64       |
| ★ Power (max per panel) | 106w          |
| ★ Weight per panel      | 7.2kg's       |

## 5mm LED screen specification

From the same manufacturer and range as the 7mm product we have invested heavily in the newer 5mm version. We bought the product to sit along side the 7mm as it uses the same screen control, driver and rigging equipment but wanted a product for applications requiring a closer viewing distance. The 5mm LED product provides a solution for large screens with a viewing distance of around 5m.

|                         |               |
|-------------------------|---------------|
| ★ Product               | Chauvet PVPS5 |
| ★ Pixel Pitch           | 5.2mm         |
| ★ Panel Size            | 500mm x 500mm |
| ★ Brightness            | 1500 NITS     |
| ★ Viewing Distance      | 5-6m          |
| ★ Resolution (pixels)   | 128 x 128     |
| ★ Power (max per panel) | 130w          |
| ★ Weight per panel      | 7.4kg's       |

## 3mm LED screen specification

The newest member of the LED team has been very popular from the outset. It boasts a high resolution at only 3.9mm this coupled with black body LED makes the contrast ratio much higher than the lower resolution products and gives the A3 Pro a much greater depth of colour. We have used the screen both as ground supported and flown helping us to incorporate large format LED screens into set design with ease. Choose the A3 pro for all your close-up viewing requirements including exhibition stands, digital signage and conference sets.
